

Full-Stack Application with SAP Fiori UI using Joule in SAP Build Code

SUMMARY :

- 1) The main motto of the “SAP BUILD CODE” is “NO-CODE & LOW CODE”.
- 2) The joule-ai may not always gives you the accurate information.
- 3) The SAP BUILD CODE drastically reduces the time for application development and increases the productivity.

STEP-1 : ADD THE SAP BUILD CODE SUBSCRIPTION IN THE COCKPIT.

GOTO COCKPIT > BOOSTERS > SAP BUILD CODE

STEP-2 : GOTO THE INSTANCES AND SUBSCRIPTIONS IN THE SUBACCOUNT & VERIFY WHETHER SAP BUILD CODE IS ADDED OR NOT.

Subaccount: trial - Instances and Subscriptions

All: 2

Search All Services All F

Subscriptions (2) Instances (0) Environments (0)

Applications to which your subaccount is currently subscribed

Application		Plan
SAP Build Code		free
SAP Business Application Studio		trial

STEP-3: CLICK ON THE SAP BUILD CODE IN THE SUBCRIPTIONS LIST, THE SAP BUILD CODE LOBBY OPENS

The SAP Build lobby opens.

WELCOME TO SAP BUILD

Create apps, automate processes, and build business sites using productivity or no-code tools.

Quick Start

**Learning**
Access our SAP Build Learning Journeys

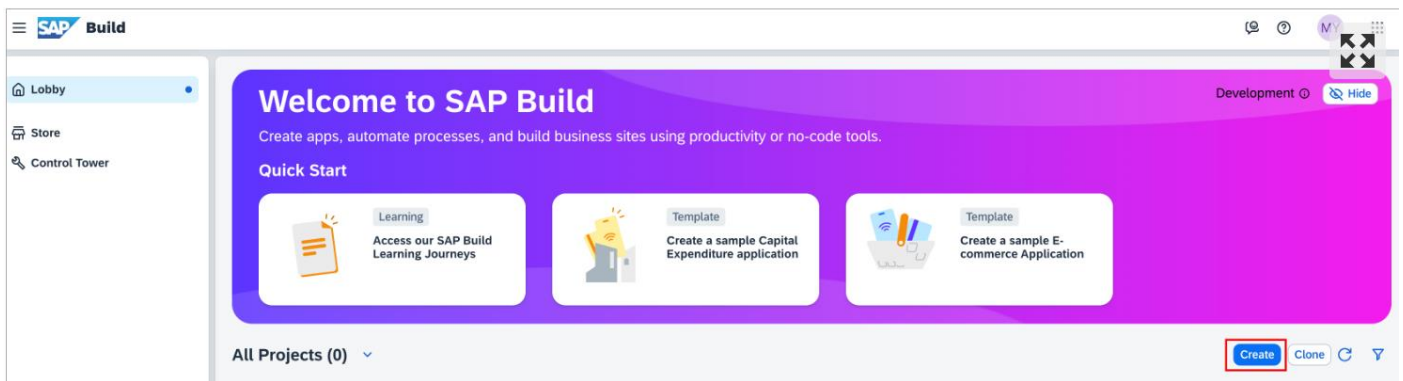

**Template**
Create a sample Capital Expenditure application

**Template**
Create a sample E-commerce Application

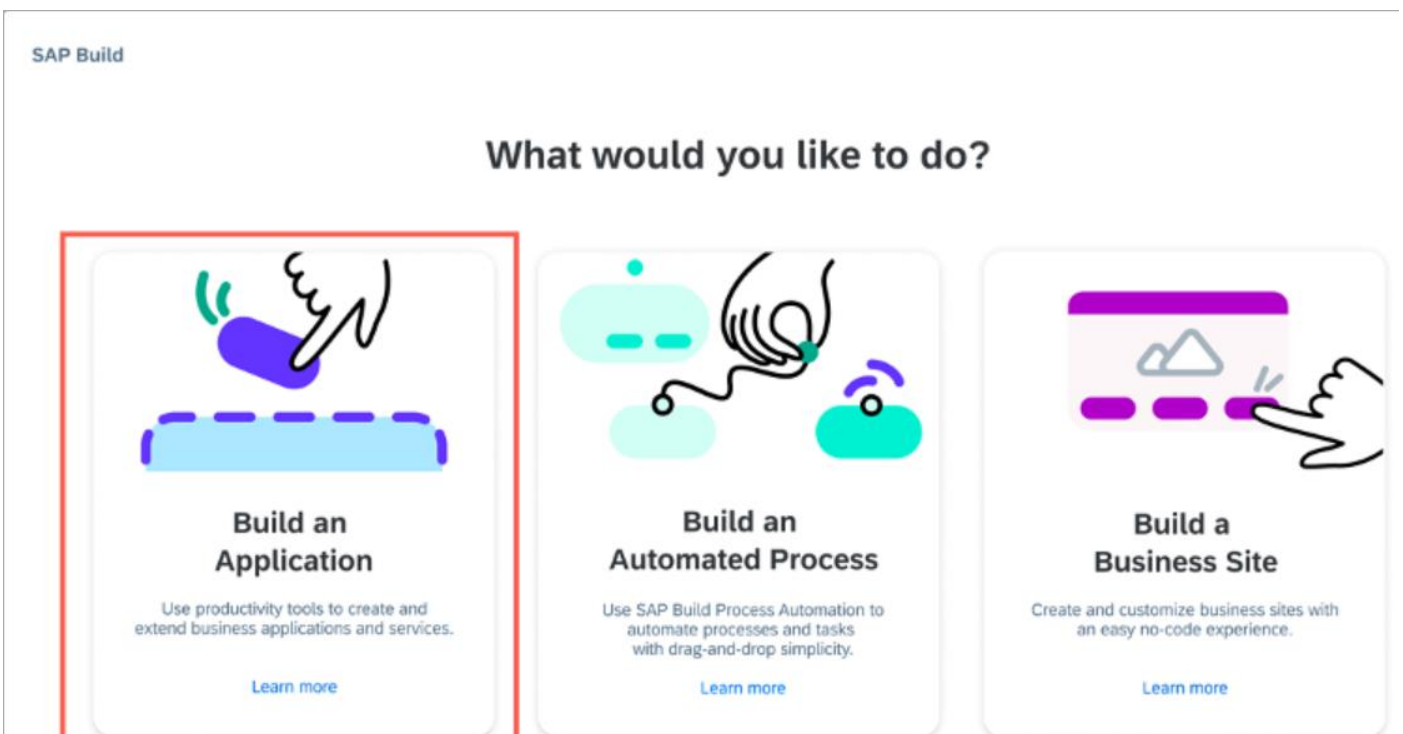

All Projects (0)

There are no projects

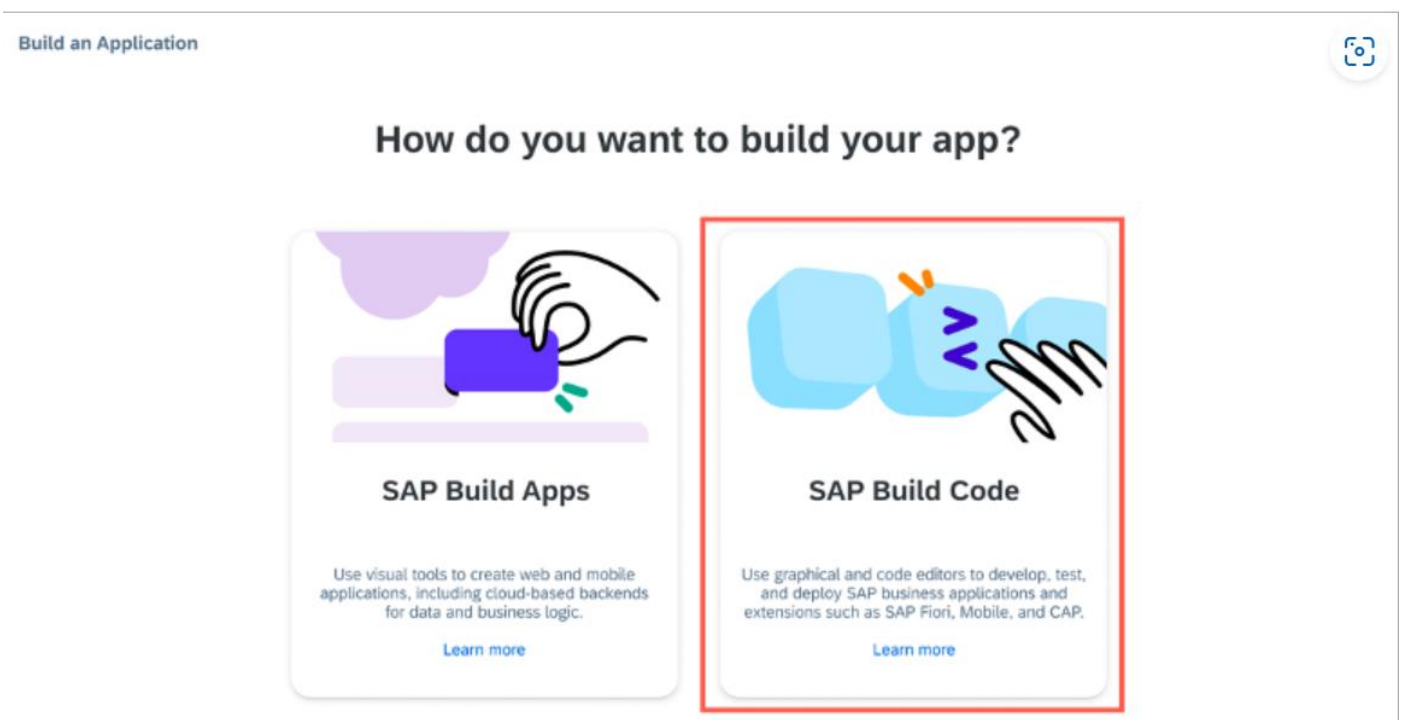

STEP-4 : CLICK ON THE CREATE OPTION IN THE SAP BUILD CODE LOBBY

STEP-5:

STEP-6 :

STEP-7 :

SAP Build Code

Select the development configuration for your scenario

SAP Fiori Application

Build the UI for your existing back-end service, using freestyle SAPUI5 or SAP Fiori elements.

[Learn More](#)

Full-Stack Application

Easily develop, extend, and deploy a full-stack application with a mobile or desktop UI.

[Learn More](#)

Mobile Application

Customize, deploy, and manage your customized iOS and Android apps in the cloud.

[Learn More](#)

STEP-8 :CLICK ON THE CREATE BUTTON & GIVE THE DETAILS OF THE PROJECT

Create a **Full-Stack** project

Give your project a name

Project Name: *

Description:

Select Dev Space: ⓘ

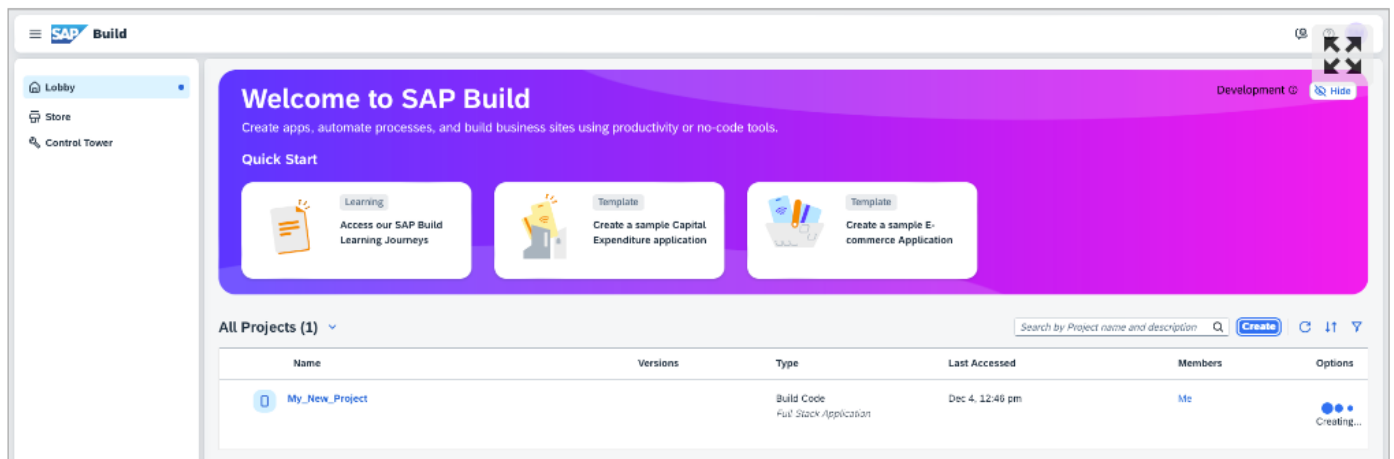

You can run up to two dev spaces at a time. For more options, go to the [Dev Space Manager](#)

[Back](#)

Create

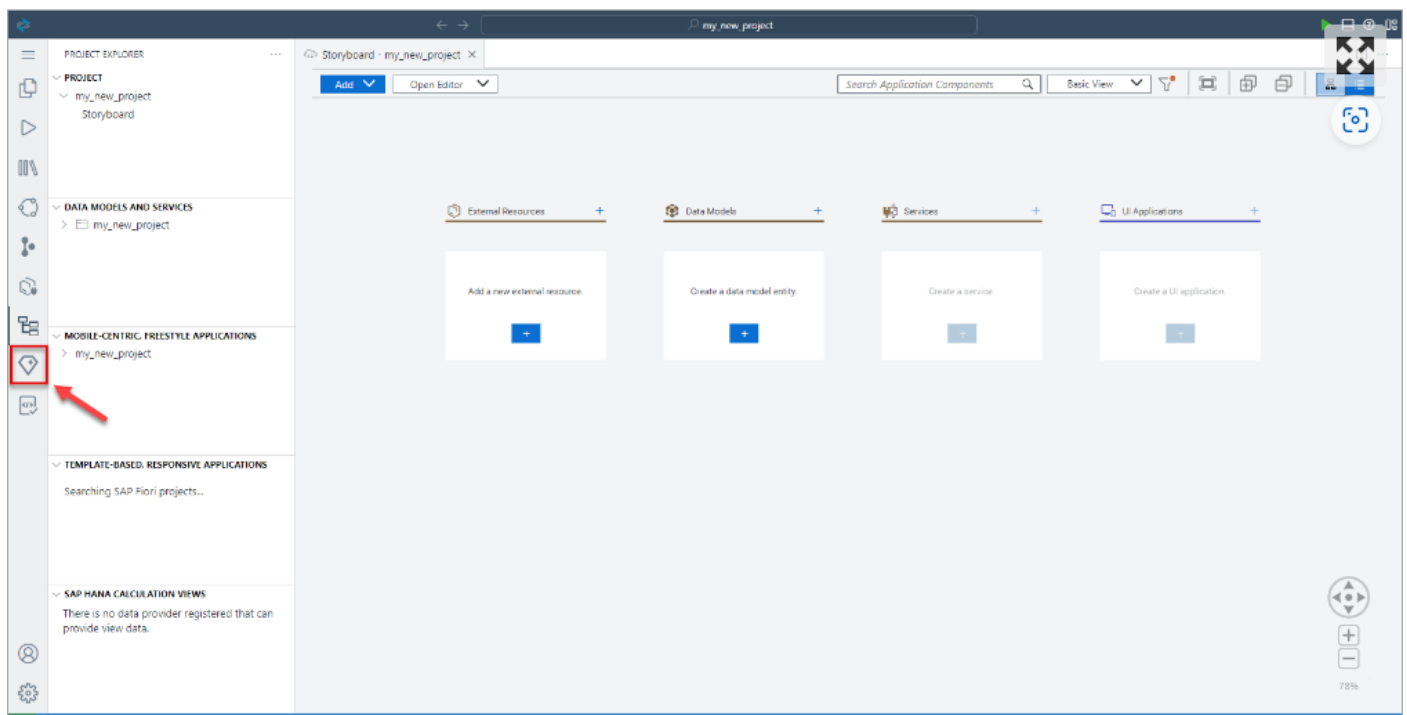

Cancel

STEP-9 :

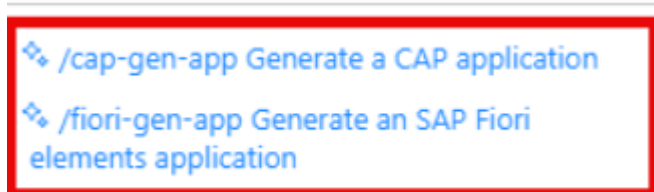

STEP-10 : CLICK ON YOUR PROJECT AND IT REDIRECTS TO THE BAS TOOL.

CLICK ON THE JOULE ICON AS SHOWN IN THE BAS.

STEP -11 : WE HAVE TWO OPTIONS TO BUILD AN APP USING CAP OR FORI.

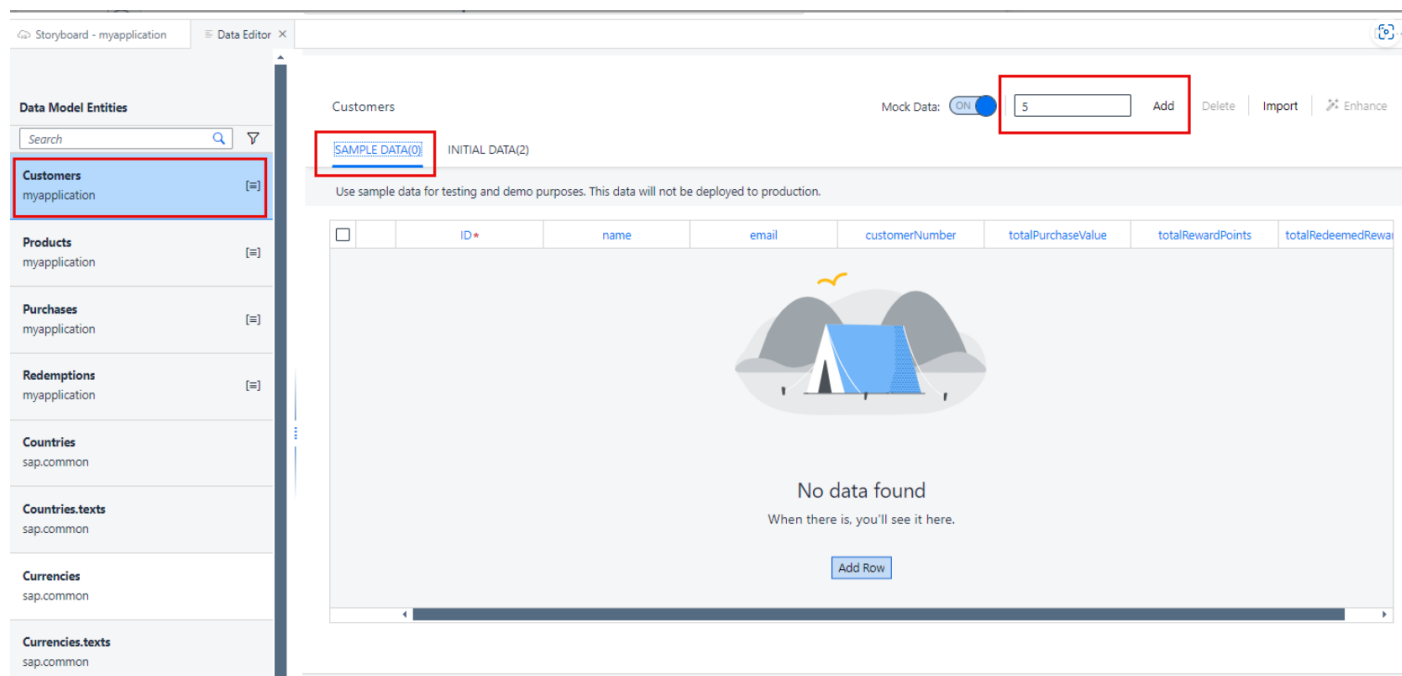

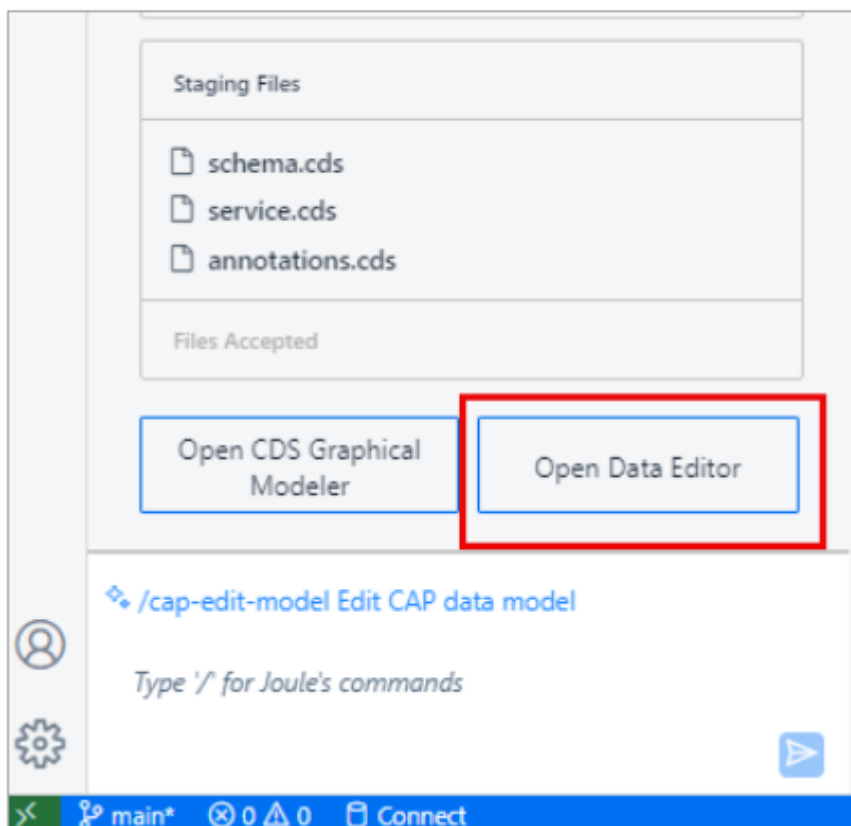

STEP – 12 : SELECT THE /CAP-GEN-APP AND THE PROMPT AS SHOWN.

/cap-gen-app Design a customer loyalty program application.
Define 4 data entities: Customers, Products, Purchases and Redemptions.
Each customer must have the following fields: name, email, 7-digit customer number, total purchase value, total reward points, total redeemed reward points.
All fields for each customer should be integer except name and email that will be stored as string.
Each product should have a name, description and price.
Purchases should include the following fields: purchase value, reward points.
All fields in Purchases must be integer.
Redemptions must have 1 field in integer: redeemed amount.
Each purchase and redemption will be associated to a customer.
Each purchase will be associated to a product and is called selectedProduct.

STEP -13 FOR ADDING THE EXTRA RECORDS TO THE DATABASE,CLICK ON THE OPEN DATA EDITOR AFTER ACCEPTING

1. Click **Open Data Editor**.

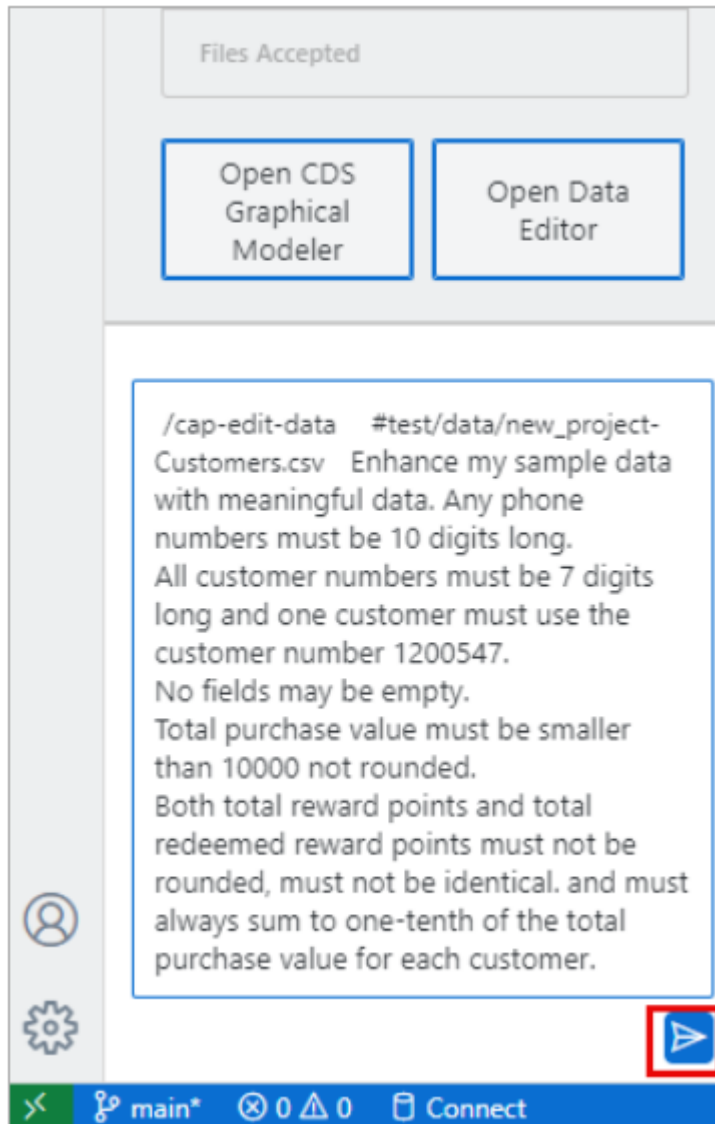

STEP-14 : CLICK ON THE ENHANCE OPTION AFTER ADDING THE RECORDS

[illegible]

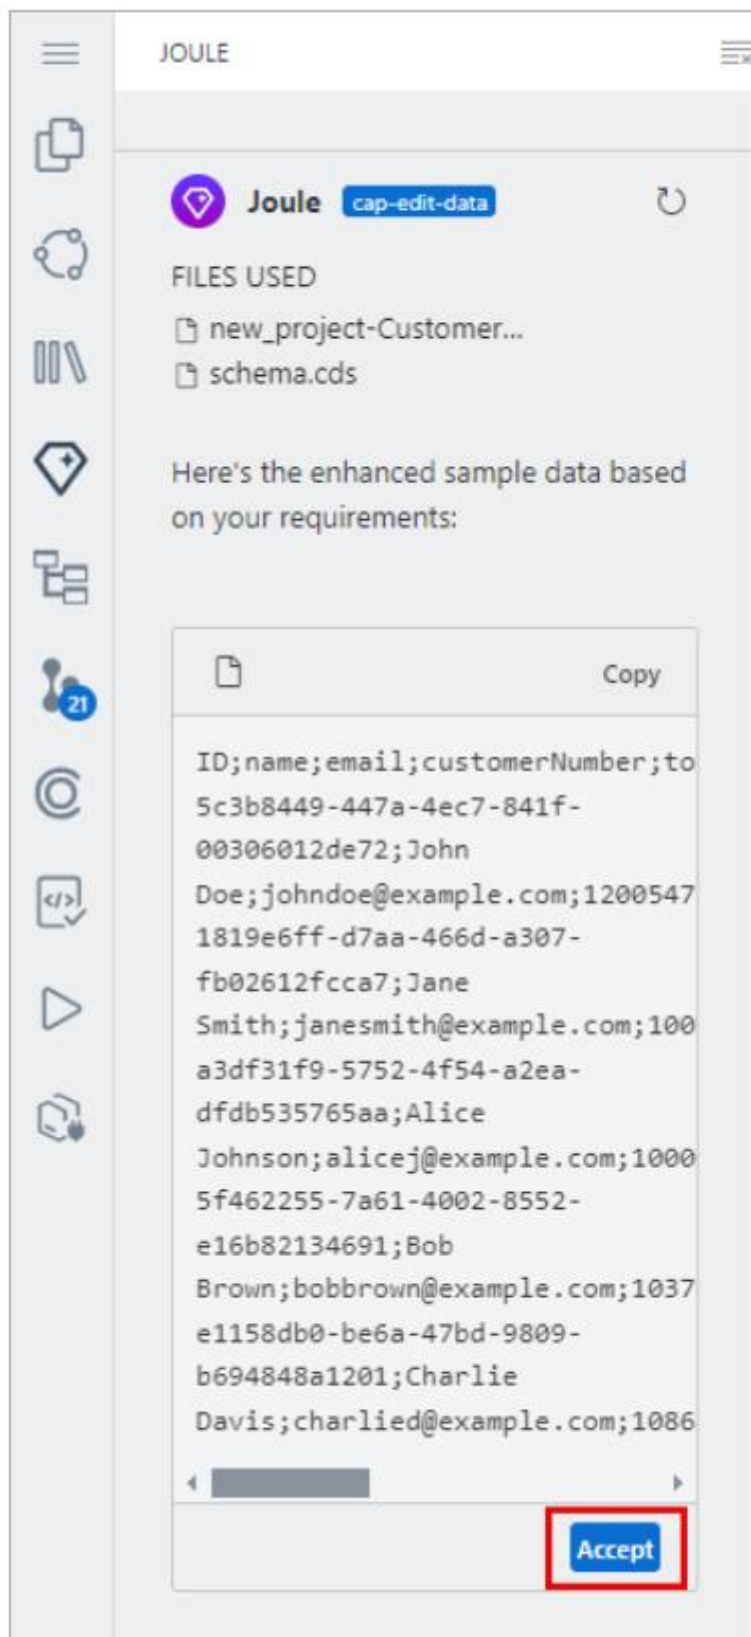

STEP-15: click on the enhance icon,further we can add how our data should be or in which format

Sample prompt:

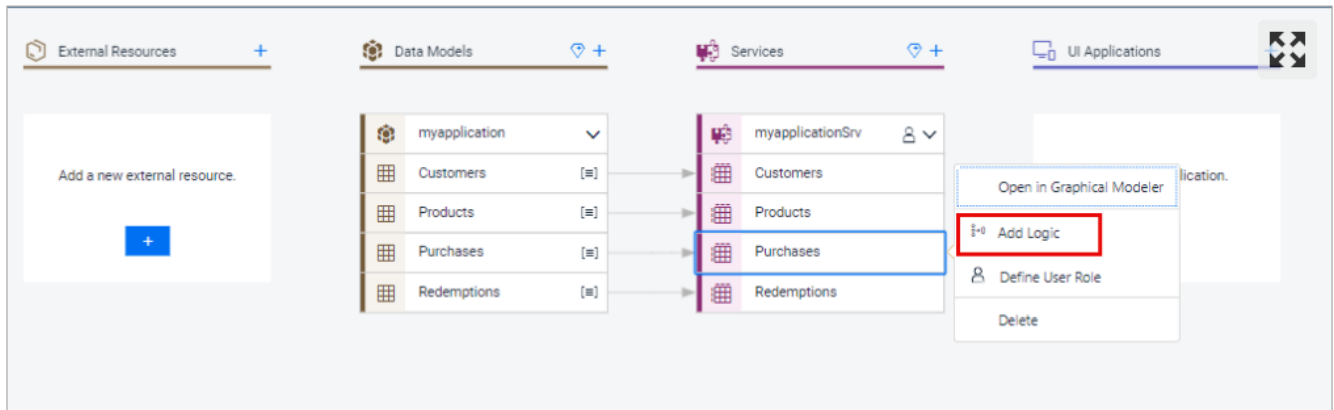

Note : after every change you made to the your application ,the joule asks to accept them or further enhance them.

Accept the code. This will add the customer names, email addresses, and purchases.

Step – 16 : Adding custom logic or generic handlers(for data validations) to our applications

1. In the Storyboard, click on the **Purchases** entity under **Services**, and select **Add Logic**.

Add Application Logic

Apply logic to:*

☒ Service Entity ☐ Service Action/Function ☐ External Service Event

Service Entity:*

new_projectSrv.Purchases

Entity Action/Function:*

No action/function

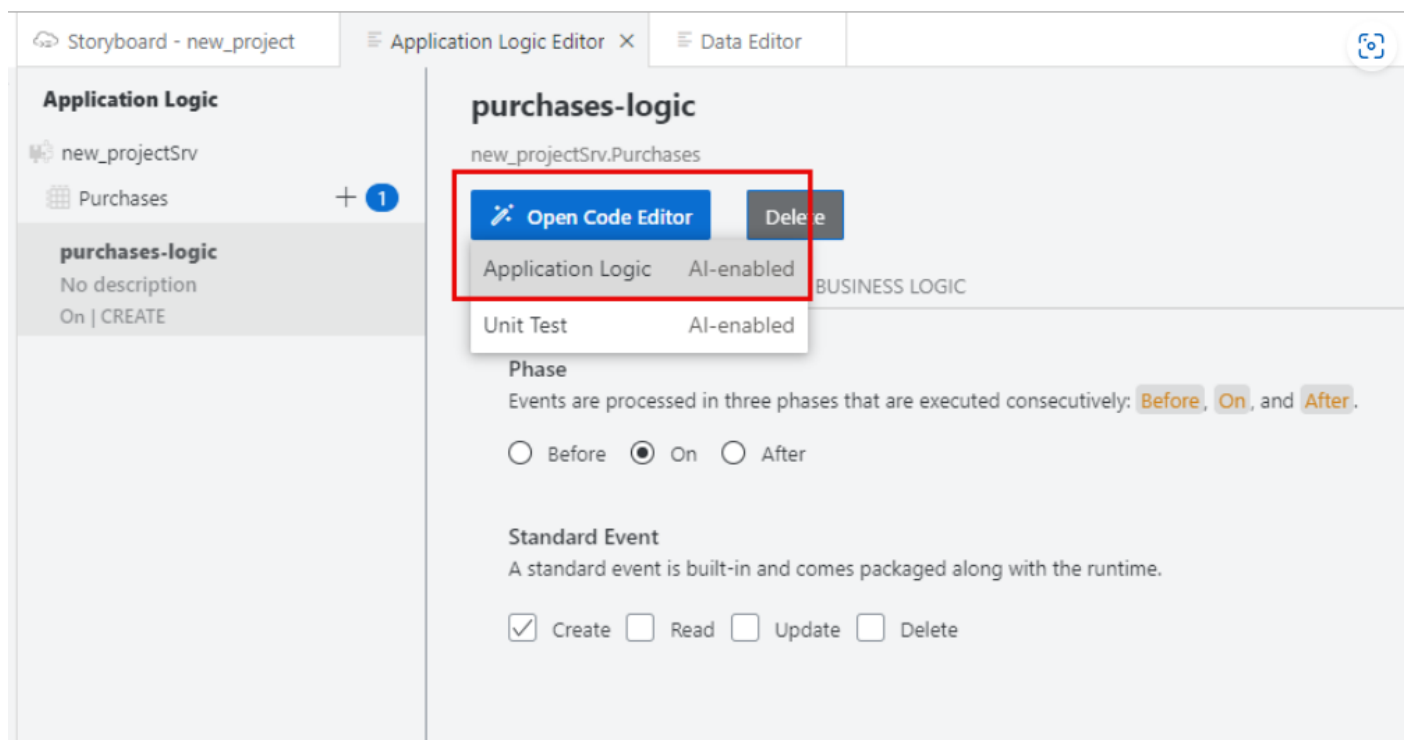

Name:*

purchases-logic

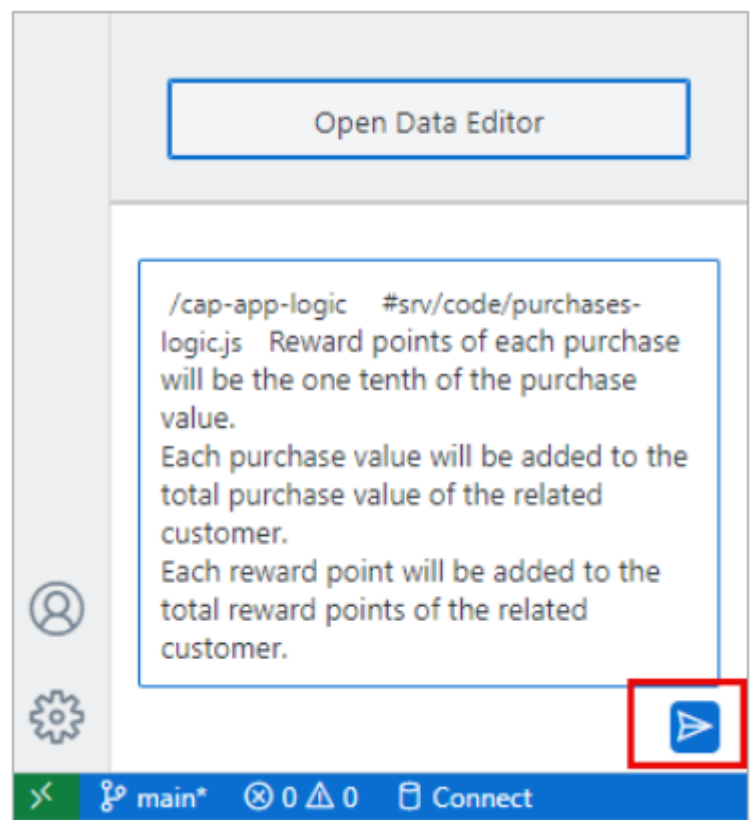

Description:

Step-17 : A)In the **Standard Event** section, select **Create**. That means that this logic will be automatically executed if an OData create operation is requested.

B)Click **Open Code Editor**, and select **Application Logic**. This will open Joule again to allow us to send a prompt to Joule to create the logic for us.

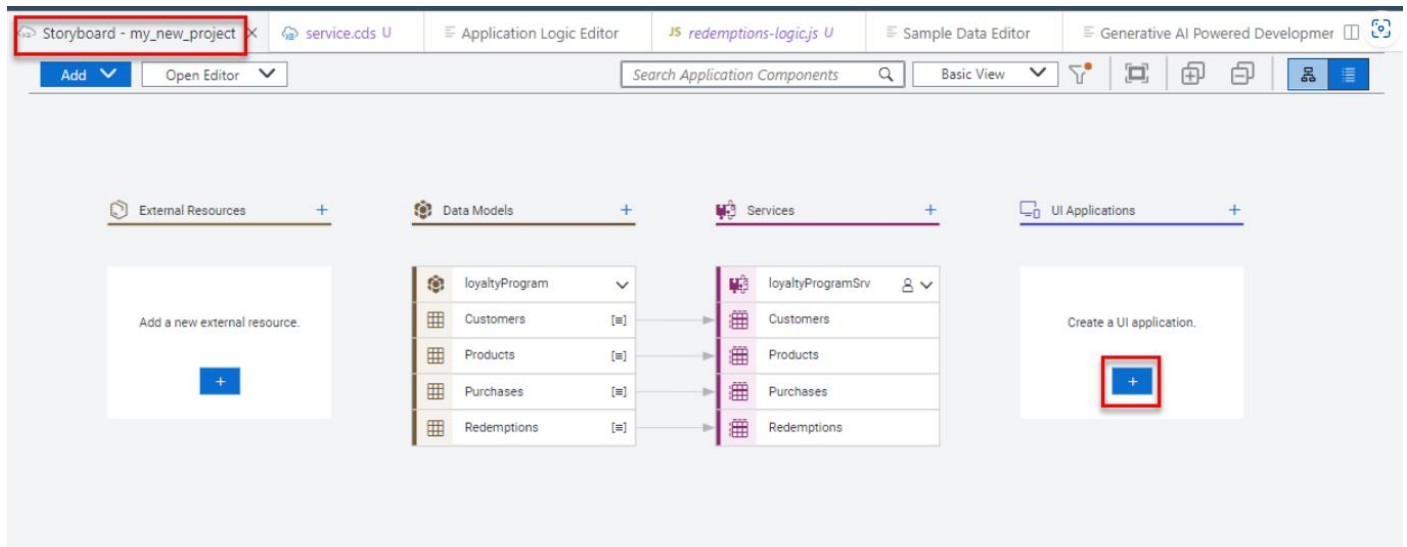

STEP-18 : ADD THE CUSTOM LOGIC AND THE DATA VALIDATIONS ACCORDINGLY

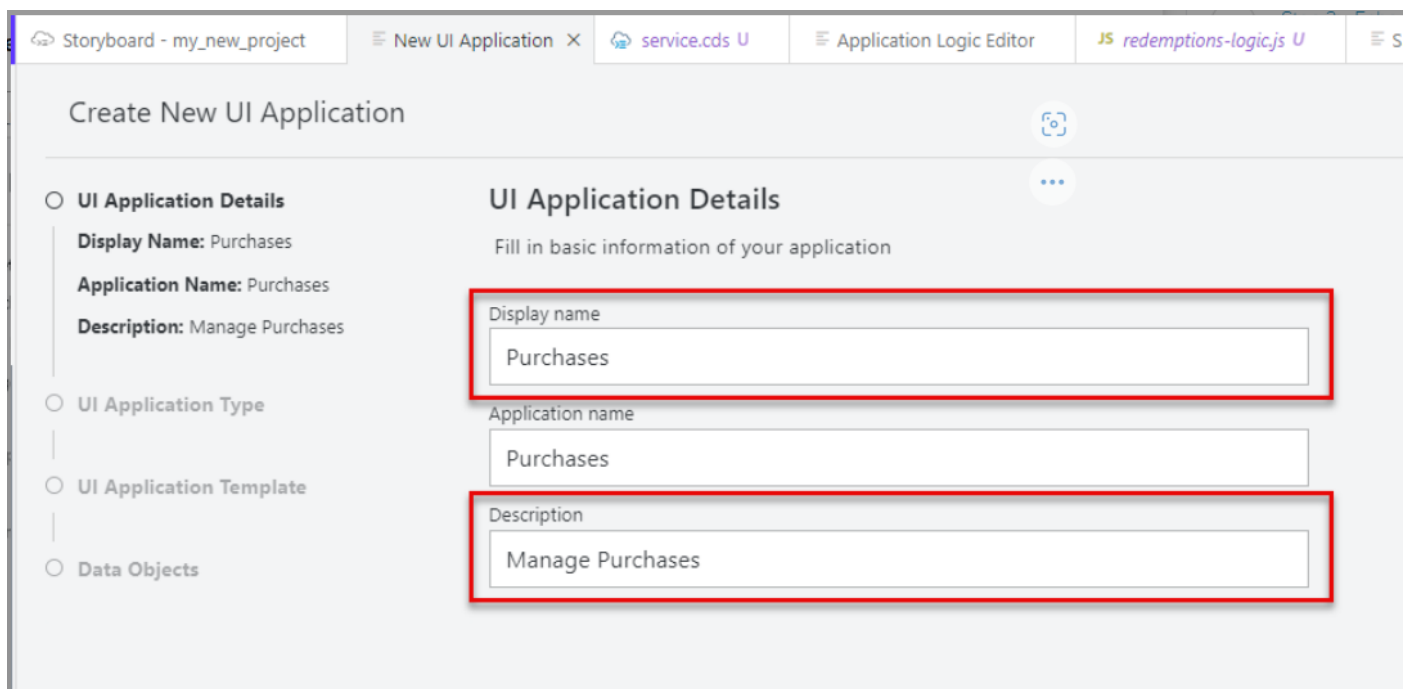

STEP -19 : THE UI PART

Go to back to the Storyboard and add a UI application.

Set the Display name to Purchases and the Description to Manage Purchases, and then click Next.

We are using the browser, so we will select **Template-Based Responsive Application** as the UI Application type, and click **Next**.
